Share this job

### **Description**

Demo SA, one of the world's largest pharmaceutical manufacturers in injectable facilities, is currently seeking for a Process Automation Engineer, who will be responsible for implementing business processes on a workflow platform to improve operational efficiency. This position is based in Athens (Kryoneri).

### **Main duties and Responsibilities**

- Analyze and capture specifications and requirements directly from the customer
- Configure and develop end to end workflow processes
- Participate in testing processes
- Identify performance improvements in existing workflows and be able to recommend enhancements and refactoring
- Be aware of security implications while developing workflows
- Work closely with the IT and Software teams to ensure that the development meets the architectural requirements
- Create documentation of all implementations

### **Requirements**

#### **Experience, skills and qualifications required:**

- BSc Degree in Computer Science, Engineering, or related field
- Minimum 2 years of proven experience with technical support, specializing in workflow development and problem diagnosis
- Understanding of SQL
- Good knowledge of APIs and experience of software integration
- Comfortable with Microsoft Power Automate and Robot Process Automations will be considered as an asset

- Familiarity with HTML, CSS, Javascript and PHP is a plus
- Problem solving skills and solution-oriented attitude
- Productivity and performance focus

**Benefits**

The company offers competitive remuneration, continuous learning and development opportunities, and a friendly and challenging working environment.
